## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-11, drawn to an electrochemical cell comprising two different cathode active materials, classified in class 429, subclass 241.
  - II. Claims 12-14, drawn to an electrochemical cell comprising three different cathode active materials, classified in class 429, subclass 209.
  - III. Claims 15-21, drawn to a method for manufacturing an electrode comprising positioning a first active material into a pressing fixture, classified in class 429, subclass 233.
  - IV. Claims 22-28, drawn to a method for manufacturing an electrode by positioning a first and second electrode active subassemblies, classified in class 429, subclass 233.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions, are unrelated because they are not disclosed as capable of use together and have different effects such that Invention I contains two cathode active materials and Invention II contains three cathode active materials.

3. Inventions III and IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions, are unrelated because they are not disclosed as capable of use together and have different effects such as Invention III, contains a first active material and a second active material separated by a current collector and Invention IV contains three active materials separated by current collectors.

4. Inventions I, II and III, IV are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, the product as claimed can be made by another and materially different process such as shown in the two methods of Invention III and IV.

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

6. A telephone call was made to Mr. Michael Scalise on Thursday, September 25, 2003 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

7. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Laura S Weiner whose telephone number is 703-308-4396. The examiner can normally be reached on M-F (7:00-4:30).
